

Your **SOLUTION**

for fine material processing

Plate & Frame Press

The AZFAB Plate & Frame Press is one of the most versatile dewatering devices for use in high solids filtration applications. With exceptional design features and simplified operation, it will provide high cake discharge consistency, low cake moisture content and superior reliability coupled with greatly reduced maintenance requirements.

- 100% manufactured in America, delivered as a complete component, and factory tested prior to shipping.
- Continuous press pressure of up to 15 bars while producing approximately 50 tons of cakes per hour.
- The adjustable hydraulic opening system dramatically reduces cycle time during the cake release. Filter and backing cloths are custom designed to fit any of the customers filtration needs.
- Compressed dry cakes can be reused or easily hauled off.
- Eliminates settling ponds.
- Recovers wash water.
